Description

Observation

openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-extra_tests_filesystem@64bit fails in snapper_used_space

Reproducible

Fails since (at least) Build 20181211

Expected result

Last good: 20181210 (or more recent)

Further details

Always latest result in this scenario: latest

btrfsprogs has changed the return value on qgroup assign if the volume needs rescan, see upstream commit https://github.com/kdave/btrfs-progs/commit/51e1faee06ddfe14989282a8e3a1c8e0c6003268

The command did execute successfully, which means the return value has to be 0 (and newly is) but the test relies on retval 1

hm, jrivera as test module maintainer will probably not be available for the next time. I don't expect this to be fixed until next year. Do you think you could fix this yourself? maxlin?
