Description

Observation

openQA test in scenario opensuse-Tumbleweed-DVD-aarch64-yast2_ncurses@aarch64 fails in yast2_samba

Reproducible

Fails since (at least) Build 20181128

Expected result

Last good: 20181116 (or more recent)

Further details

Always latest result in this scenario: latest

Most of the time yast2_samba fails when it comes to send OK (alt-O) to LDAP setup. Sometimes it passes.

History

#1 - 19/12/2018 01:29 pm - okurz
- Subject changed from [aarch64] test fails in yast2_samba to [functional][y][aarch64] test fails in yast2_samba
- Priority changed from Normal to High
- Target version set to Milestone 23

#2 - 04/01/2019 06:37 am - okurz

This is an autogenerated message for openQA integration by the openqa_review script:

This bug is still referenced in a failing openQA test: yast2_ncurses
https://openqa.opensuse.org/tests/822695

I cannot see how this bug could be related to the current problem. Could you explain, please?

I cannot see how this bug could be related to the current problem. Could you explain, please?

It's almost impossible to understand from openQA. So due to that bug, we cannot apply the config. You can try that manually, once you configure everything and press Ok on https://openqa.opensuse.org/tests/817134#step/yast2_samba/20 step, nothing happens for the user. UI remains open, no error reported (except the logs). And automated test fails as we expect error for 389ds package. But due that bug we don't have package, so no error. Hope it's more clear now. Let me know if you have more questions.
