Target version:			
Difficulty:			
Description			
Observation			
openQA test in scenario sle-12-SP3-Desktop-DVD-Updates-x86_64-qam-regression-message@64bit fails in window_system			
This variable should be defined by the session manager and can be used to distinguish between x11 and wayland session.			
Reproducible			
Fails since (at least) Build 20190102-2 (current job)			
Expected result			
Last good: 20190102-1 (or more recent)			
Further details			
Always latest result in this scenario: latest

Hi, your changes caused a failure in https://openqa.suse.de/tests/2364491#step/window_system/10, because this is a VNC test case, the network is different.

I think you can fix this by adding "type_command" parameter to "script_output".

This seems like an acceptable solution: <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/6514>

It looks like the root user didn't logout before the end of window_system.

The failure of https://openqa.suse.de/tests/2384774#step/xrdp_server/64 is caused by this.

So, it is necessary to logout the root user before the end of window_system.
