

openQA Tests - action #46586

[desktop] Missing mouse click once in a while with openQA

2019-01-24 06:22 - zgao

Status:	New	Start date:	2019-01-24
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Bugs in existing tests	Estimated time:	0.00 hour
Target version:			
Difficulty:			
Description			
Observation			
openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-desktopapps-documentation-x11@64bit fails in libreoffice_mainmenu_components			
Cause of failure is that mouse click is missed. And it happens at about 1 out of 15 times.			
You could refer to desktopapps-documentation and desktopapps-documentation-x11 to see past failures.			
It is observed that click only misses at this step , where we tried to assert and click libreoffice calc, and log tells us openQA clicked it, but it did not open.			
Reproducible			
Fails since (at least) Build 20181219 (current job)			
Expected result			
Last good: 20181218 (or more recent)			
Further details			

History

I think this really falls in the domain of "[desktop]", the team which also maintains the more advanced desktop related testsuites, e.g. on libreoffice.

[zgao](#) you are in "[desktop]", right? I suggest you can also use these team tags directly on creation of tickets unless you see it as a generic issue of openQA, then the ticket should be in the parent project <https://progress.opensuse.org/projects/openqav3>. Existing tickets can be easily moved as well. However, to me this looks like a test specific issue and not within the generic openQA behaviour.

#3 - 2019-01-25 05:20 - zgao

Thank you but I might argue this is a generic openQA issue though.

We have click misses in other circumstances too

- [firefox_fullscreen_in_wayland-desktopapps-firefox_in_osd](#)
- [application_starts_on_login_in_desktopapps-gnome](#)

Interestingly, `assert_and_click` misses click at a designated test. For wayland-desktopapps-firefox, when click miss happens it happens at `firefox_fullscreen`.

What do you think?

#4 - 2019-01-25 17:51 - okurz

This is what I mean, it only happens in specific tests :)

I would state that we do not have this issue within [functional]
