#### Description

##### Observation

openQA test in scenario opensuse-15.1-DVD-x86_64-openqa_bootstrap@64bit fails in openqa_bootstrap

##### Test suite description

Maintainer: dheidler. Install openQA using openqa-bootstrap script.

I didn't ask for that test in Leap. Why was it added without notification and then even broken?

#### Reproducible

Fails since (at least) Build 402.2 (current job)

#### Expected result

Last good: (unknown) (or more recent)

#### Further details

Always latest result in this scenario: latest

#### History

**#1 - 29/01/2019 02:11 pm - dheidler**

- Status changed from New to In Progress
- Assignee set to dheidler

The test was added as discussed in [https://progress.opensuse.org/issues/45365](https://progress.opensuse.org/issues/45365)

Looks like an actual bug in openqa_bootstrap when being executed on leap.

**#2 - 29/01/2019 02:19 pm - dheidler**

- Status changed from In Progress to Resolved

The problem only seems to happen for unreleased LEAP versions due to the "Alpha" suffix in the VERSION in /etc/os-release. As there is also no [https://build.opensuse.org/project/show/devel:openQA:Leap:15.1](https://build.opensuse.org/project/show/devel:openQA:Leap:15.1) repo I will disable this testsuite for LEAP.

**#3 - 20/03/2020 03:55 pm - oorlov**
@dheidler, sorry for re-opening the ticket, but the test also fails on Tumbleweed, on a different step (https://openqa.opensuse.org/tests/842157#step/test_results/7).

The job in the test finishes with Incomplete state. May it be related to openQA issue or it is test problem? WDYT?

I've also reproduced it locally by cloning the job. Please see the attached autoinst-log.txt.

#4 - 29/01/2019 04:19 pm - dheidler
- Status changed from Workable to In Progress

This is a bug in tumbleweed: qemu-3.1 doesn't really work with nested virt.
This is not related to this ticket here.

See https://bugzilla.suse.com/show_bug.cgi?id=1121604

#5 - 29/01/2019 04:19 pm - dheidler
- Status changed from In Progress to Resolved

#6 - 31/01/2019 06:48 am - okurz
- Status changed from Resolved to In Progress

@dheidler please adress the concerns from lnussel in the description and make sure the according tests are labeled with the proper bug link. I agree that the feature shows something useful and also a valid product issue that I would also like to not have in openSUSE Leap but we need to make that explicit. Having a failing test that was never green and is labeled with a "resolved" progress issue is not achieving this goal.

#7 - 31/01/2019 09:45 am - dheidler
- Status changed from In Progress to Resolved

Discussed in person:

- this testsuite is not scheduled for leap anymore
- this testsuite fails on tumbleweed due to a product bug (qemu-3.1 vs. nested virt) and is already labeled.
