

openSUSE Leap 15.1 - action #47768

release manager checklist

2019-02-13 12:05 - Inussel

Status: Closed	Start date: 2019-04-29
Priority: Normal	Due date: 2019-04-29
Assignee:	% Done: 0%
Category: Infrastructure	Estimated time: 0.00 hour
Target version: RC	

Description

To branch the current ftp tree and isos for a milestone, log in to download.opensuse.org as mirror user and run:

```
distro_hardlink_copy 42.2-Current 42.2-RC1
```

Remove x bit for others from the directory so only staging mirrors can pull it but it's not visible on download.o.o

on release day every once in a while scan for mirrors as mirror user:

```
mb scan -a -d /distribution/leap/42.2-RC1 -j4
```

In the morning add the x bit again to make the content show up and give mirrors time to catch up adding the x bit.

At release time:

- change the symlink to the new milestone

```
distro_symlink 42.2 42.2-RC1
```

- sync the staging are to the area shown in download.opensuse.org

```
publish_opensuse
```

You may want to add '-n' before to check what it's doing and not deleting files
