Description

Motivation:

Currently, create_hdd_minimal_base+sdk_withhome Test Suite is running on s390x architecture on sle12 (e.g. [https://openqa.suse.de/tests/2522245](https://openqa.suse.de/tests/2522245)). This Test Suite assumes, that the separate /home partition will be created during installation.

Though, there is no option for making separate /home on s390x on sle12.

Task:

1. Identify if the Test Suite really need to be run on s390x (e.g. it verifies something special, that other Test Suites do not verify);
2. Remove s390x from the list of architectures in "Operators Menu > Job Groups > Sle 12: Functional (Server)";
3. (Optional) Depending on investigations from #1, if the Test Suite still need to be executed on s390x, it should be extracted and renamed to reflect the reality (e.g. to create_hdd_minimal_base+sdk ).

History

#1 - 2019-03-14 12:15 - riafarov
- Target version set to future

#2 - 2020-06-17 07:19 - riafarov
- Status changed from New to Rejected
- Assignee set to riafarov

not relevant anymore.
