[functional][u] test fails in rebootmgr - No logs uploaded

2019-05-21 18:58 - ggardet_arm

Status:	Resolved	Start date:	2019-05-21
Priority:	High	Due date:	
Assignee:	ggardet_arm	% Done:	0%
Category:	Bugs in existing tests	Estimated time:	0.00 hour
Target version:	Milestone 25		
Difficulty:			
Description			
Observation			
rebootmgr does not upload journalctl logs, so it is difficult to debug the failure. post_fail_hook should be updated to upload more logs. It should be enough to use consoletest as base.			
openQA test in scenario opensuse-Tumbleweed-DVD-aarch64-transactional_server@aarch64 fails in rebootmgr			
Suggestions			
Properly implement a post fail hook that is calling the export_logs and export_logs_locale methods.			
Reproducible			
Fails since (at least) Build 20190508			
Expected result			
Last good from Tumbleweed x86_64: 20190521			
Further details			
Always latest result in this scenario: latest

Any update on this?

The problem seems to be with console selection.
