Description

Observation

openQA test in scenario opensuse-15.1-Argon-Live-x86_64-krypton-live-installation@64bit-2G fails in system_role looking for "before-role-selection" but finding the partitioning screen instead.

Test suite description

Boots the openSUSE Krypton/Argon Live DVD and uses the installer to install with default settings, then reboots into the installed system.

Reproducible

Fails since the Argon medium is built based on Leap 15.1 instead of Leap 15.0

Expected result

Last good: https://openqa.opensuse.org/tests/944335#step/installer_desktopselection/1 of Argon 15.0 build 5.180

Another reference is Krypton (based on Tumbleweed) where the test does not expect the "role selection" but correctly looks for the partitioning screen https://openqa.opensuse.org/tests/945654#step/partitioning/1

Further details

Always latest result in this scenario: latest

well, it did work but only before the rebase on Leap 15.1 which is only some days ago. Please see the "Expected result" accordingly. Therefore please reconsider the "target version" as M27 might bring is again into a situation where we lost the reference. Better take a look sooner. Agreed?
