### Description

**Observation**

o3/var/log/openqa complains about "Unable to get filename from [http://openqa.opensuse.org](http://openqa.opensuse.org). Ignoring OPENQA_HOST_URL". All settings with the suffix _URL have a special meaning in openQA for downloadable assets. This variable is used in the "openQA-in-openQA" tests in both os-autoinst-distri-opensuse as well as os-autoinst-distri-openQA

**Suggestion**

Replace the variable in the test suite settings as well as in the test code with something that does not end in _URL, why not just OPENQA_HOST ;)

Could be improved in openQA as well to not spit out a warning, e.g. ignore for download all URL settings that do not have an understandable asset type, e.g. ISO/HDD/ASSET

### History

**#1 - 2019-10-15 08:22 - SLindoMansilla**

- Priority changed from Normal to High

- Assignee set to okurz

Please, take a look.
We don't understand what is this about. Do you have any job links where this is happening?

**#3 - 2019-11-04 10:55 - szarate**

- Priority changed from High to Low

- Target version set to future

I see what this is about now, however, it's not a problem for us for the time being...

**#4 - 2019-11-08 22:35 - okurz**

- Status changed from New to Feedback
sure, I can do this. Sorry if I wasn't clear enough with the description however the fix is trivial (as suggested):

https://github.com/os-autoinst/os-autoinst-distri-openQA/pull/49

changed the setting in https://openqa.opensuse.org/admin/test_suites and for the openQA changes:
https://github.com/os-autoinst/openQA/pull/2469

#5 - 2019-11-09 10:21 - okurz
- Status changed from Feedback to Resolved

one more change in https://github.com/os-autoinst/scripts/pull/9 and
https://openqa.opensuse.org/tests/overview?distri=openqa&version=Tumbleweed&build=%3ATW.3354&groupid=24 shows we are good
