Description

Observation

openQA test in scenario sle-12-SP5-Server-DVD-x86_64-media_upgrade_sles12sp4_allpatterns_vmware@svirt-vmware65 fails in [start_install](#)

In VMware SP4 migration images /etc/default/grub_installdevice is either missing, or wrongly set (more likely the former).

It worked fine when migrating to 15 SP1 but does not when migrating to 12 SP5 (https://bugzilla.suse.com/show_bug.cgi?id=1141016).

Reproducible

Fails since (at least) Build [0219](#)

Expected result

Last good: (unknown) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

Check that /etc/default/grub_installdevice is present in the image. If it isn't create it with device where is bootloader, stop the VM and export the image.

If it didn't help the image should be created again from install disk.

To prevent further reminder comments one of the following options should be followed:

1. The test scenario is fixed by applying the bug fix to the tested product or the test is adjusted
2. The openQA job group is moved to "Released"
3. The label in the openQA scenario is removed

This ticket was set to "Normal" priority but was not updated within the SLO period for "Normal" tickets (365 days) as described on <https://progress.opensuse.org/projects/openqatests/wiki/Wiki#SLOs-service-level-objectives> . Please consider picking up this ticket within the next 365 days or just set the ticket to the next lower priority of "Low" (no SLO related time period). This update was done as agreed within the SUSE QE Sync call 2021-09-01

[xlai](#) this is a very old ticket and Michal has left SUSE already. Do you think that is still relevant or can we close the ticket?
