Description

I had the issue just below with two workers (opengaworker7 and 6):

[2019-07-18T16:24:32.567 CEST] [debug] qemu-img: Could not open '/var/lib/openqa/pool/11/raid/hd0-overlay8': Could not open backing file: Could not open backing

This is not the first time I see this message, perhaps it's a known issue.

I know that other poo are opened for opengaworker7 (poo#54074 and poo#49694) but I'm not aware of any for opengaworker6.

List of failed tests:

worker 6 https://openqa.suse.de/tests/3090100 worker 6 https://openqa.suse.de/tests/3088928 worker 7 https://openqa.suse.de/tests/3087514

The test was re-triggered by a POST command and was ok in openqaworker9.

worker 9 https://openga.suse.de/tests/3092394

I see poo#54128 as well but looks like different.

History

#1 - 2019-07-29 07:46 - jadamek

Actually, this issue seems to be not related to specific workers at all. New errors with the last build '0103@0248':

 $\underline{\text{https://openqa.suse.de/tests/3157016}} ==> openqaworker9:12$

https://openga.suse.de/tests/3157020 ==> opengaworker8:21

https://openga.suse.de/tests/3156008 ==> opengaworker7:18

https://openga.suse.de/tests/3156011 ==> opengaworker6:16

https://openqa.suse.de/tests/3156980 ==> openqaworker8:8

https://openga.suse.de/tests/3156085 ==> opengaworker7:7

https://openga.suse.de/tests/3156083 ==> opengaworker13:9

#2 - 2019-08-20 14:53 - okurz

- Is duplicate of action #46742: test incompletes trying to revert to qemu snapshot auto_review:"Could not open backing file: Could not open
- .*.qcow.*No such file or directory", likely premature deletion of files from cache added

#3 - 2019-10-01 08:29 - coolo

- Project changed from openQA Infrastructure to openQA Project
- Subject changed from qemu-img convert failed in some workers to qemu-img convert failed

#4 - 2019-10-01 09:14 - okurz

- Category set to Concrete Bugs
- Status changed from New to Rejected

2021-10-18

- Assignee set to okurz
- Target version set to Done

then we can actually close it as the duplicate it is.
