### [functional][y][timeboxed:8h] test tries to reboot when poweroff is given in shutdown

2019-10-07 08:37 - ybonatakis

<b>Status:</b>	Resolved	<b>Start date:</b>	2019-10-07
<b>Priority:</b>	Normal	<b>Due date:</b>	2019-10-22
<b>Assignee:</b>	oorlov	<b>% Done:</b>	0%
<b>Category:</b>	Bugs in existing tests	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	Milestone 29		
<b>Difficulty:</b>			
<b>Description</b>			
<b>Observation</b>			
openQA test in scenario sle-15-SP2-Installer-DVD-s390x-cryptlvm@s390x-zVM-hsi-l2 fails in <a href="#">shutdown</a>			
The shutdown module makes a call to the power_action to poweroff. I think the type_string "\$action\n"; is not reach in power_action which makes the flow to check the else statement. from there it should drop into the poweroff_x11. Maybe it would be better to pass the textmode parameter explicitly in to the power_action.			
This is cause by the change that we start testing gnome on s390x again and therefore use gnome menu to shutdown the system. Console way of shutting down worked fine: <a href="https://openqa.suse.de/tests/3305529#step/shutdown/6">https://openqa.suse.de/tests/3305529#step/shutdown/6</a>			
We need to investigate why gnome way doesn't work (maybe we don't press authenticate button). If problem is not resolved, we need follow-up ticket to apply the solution.			
<b>Test suite description</b>			
Maintainers: okurz			
Conduct installation with encrypted LVM selected during installation. Generated disk image used in downstream jobs.			
(crypt-)LVM installations can take longer, especially on non-x86_64 architectures.			
YAML_SCHEDULE=schedule/yaml/cryptlvm/cryptlvm_sle.yaml			
<b>Reproducible</b>			
Fails since (at least) Build <a href="#">36.1</a>			
<b>Expected result</b>			
Last good: <a href="#">27.1</a> (or more recent)			
<b>Further details</b>			
Always latest result in this scenario: <a href="#">latest</a>
