Description

Observation

openQA test in scenario sle-12-SP5-Desktop-DVD-x86_64-regression-documentation@64bit fails in [libreoffice_pyuno_bridge](#)

This is not a product bug; I think this error happens because after libreoffice got an upgrade, the user interface changed a little, in the "Server Authentication" dialog, it proposes a default username ("admin@localhost"), but we still type our username, causing the username to become "adminadmin@localhost".

I think this can be fixed by adding "ctrl-a" which selects the default username and causes it to be overwrite by our typing.

Test suite description

Reproducible

Fails since (at least) Build [0210](#)

Expected result

Last good: (unknown) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

History
