Description

Observation

openQA test in scenario sle-12-SP5-Server-DVD-ppc64le-extra_tests_kdump_multipath_lvm_encrypt@ppc64le fails in kdump_and_crash

Test suite description

Maintainer: pcervinka@suse.com  run kdump on multipath, lvm with encryption

Reproducible

Fails since (at least) Build 0358 (current job)

Expected result

Last good: 0357 (or more recent)

Further details

Always latest result in this scenario: latest

Sometimes is needle for passphrase matched from previous password prompt, like at this point https://openqa.suse.de/tests/3477345#step/kdump_and_crash/65

We need to make sure that proper needle is matched after kdump.

History

#1 - 2019-10-30 11:32 - pcervinka
- Target version changed from 445 to 454

#2 - 2020-04-02 07:42 - pcervinka
- Status changed from New to Rejected
- Target version changed from 454 to 457

Didn't occur for several months.

#3 - 2020-10-23 13:41 - pcervinka
- Target version changed from 457 to QE Kernel Done
