Category:	Bugs in existing tests	Estimated time:	0.00 hour
Target version:			
Difficulty:			
Description			
Observation			
openQA test in scenario sle-15-Server-DVD-Incidents-Kernel-ppc64le-kernel-live-patching@ppc64le-virtio fails in qa_test_klp			
The VM image was installed for kernel build 1760 but the test job was stuck in queue for too long and a new kernel build became available in the mean time. When the test finally started, the test job installed kernel source for build 1761. The live patch compiler then couldn't find the kernel sources and the job failed.			
Solution: Read running kernel version from uname and always install specific version of kernel sources.			
Test suite description			
qa_test_klp, test of Kernel Livepatching Infrastructure			
Reproducible			
Fails since (at least) Build 4.12.14-1760.1.gcb14640 (current job)			
Expected result			
Last good: 4.12.14-1754.1.g481da9b (or more recent)			
Further details			
Always latest result in this scenario: latest			

History

#1 - 2019-10-31 16:06 - MDoucha

- Subject changed from test fails in qa_test_klp (kernel source version mismatch) to [qam]test fails in qa_test_klp (kernel source version mismatch)
- Assignee set to MDoucha

#2 - 2019-11-01 08:26 - MDoucha

- Status changed from New to In Progress
- % Done changed from 0 to 80

#3 - 2019-11-21 14:16 - MDoucha

- Status changed from In Progress to Resolved
- % Done changed from 80 to 100

Fix has been merged. <https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/8819>
