The training was done at 2019.11.1 morning.
Here are some feedback.

1. Could we provide a more friendly way to write the YAML file in the job group? Now users need to write the YAML file in the job group. (About the form is not clear)
2. Could we provide a way to restore/recover the YAML file? If they delete or modify the YAML file wrong, they could recover it to before the modification.
3. This is a feature request, not about YAML. Could we provide a way to modify a job settings when restarting the job in web UI? (use clone-job in the command line)
