openQA Tests - action #58739

[qac][jdp][public cloud] Group publiccloud images by FLAVOR in JDP report

2019-10-28 12:32 - cfconrad

Status:	Workable		**Start date:**	2019-10-28
Priority:	Low		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Enhancement to existing tests		**Estimated time:**	0.00 hour
Target version:				
Difficulty:				

Description

Problem:
Publiccloud-team produce image with KIWI and BUILD number.
The result is, that we can get different KIWI-BUILD tuple within each FLAVOR (@see
https://build.suse.de/package/view_file/SUSE:SLE-12-SP5:GA/SLES12-SP5-Azure/config.kiwi?expand=1)

TODO:
We need to adopt JDP to build groups based on VERSION-FLAVOR-ARCH-MACHINE. (@see
https://gitlab.suse.de/rpalethorpe/jdp/blob/master/notebooks/Report-Status-Diff.ipynb)

Example list of PC images:

```
SLES12-SP5-Azure.x86_64-0.9.0-Standard-On-Demand-Build3.2
SLES12-SP5-Azure.x86_64-0.9.0-Basic-On-Demand-Build3.2
SLES12-SP5-Azure.x86_64-0.9.1-BYOS-Build3.2
SLES12-SP5-EC2.x86_64-0.9.1-BYOS-Build1.55
SLES12-SP5-EC2.x86_64-0.9.1-On-Demand-Build1.55
SLES12-SP5-GCE.x86_64-0.9.1-On-Demand-Build1.55
SLES12-SP5-GCE.x86_64-0.9.1-BYOS-Build1.55
```

The FLAVOR variable from openQA contains both (CPS name and Image flavor), e.g. GCE-On-Demand or
Azure-Standard-On-Demand.
The BUILD variable form openQA contains KIWI and Build number, separated by -, e.g. 0.9.1-1.55.

Clemens, can you update ticket once you are back? Not sure the status of it and if it's already applicable.
