Description

It looks like shortcuts are changed in the last build on Tumbleweed (Build20191219) in Guided Setup Wizard.

Task

1. Investigate if the shortcuts were changed, or the test module is affected by some other test module;
2. Adapt the test module in case the changes in shortcuts are made.

openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-cryptlvm@uefi fails in encrypt_lvm

Test suite description

Maintainers: okurz

Conduct installation with encrypted LVM selected during installation.

Reproducible

Fails since (at least) Build 20191219 (current job)

Expected result

Last good: 20191218 (or more recent)

Further details

Always latest result in this scenario: latest

History

#1 - 2019-12-20 13:43 - oorlov
- Description updated

#2 - 2019-12-20 13:46 - dimstar

Looking a bit deeper: the keyboard shortcuts are shuffled around because the "Release Notes" button is missing. That button is dynamically added if Release Notes could be downloaded from the internet.

There are currently a bunch of Network related issues around (e.g. html5test.opensuse.org not reachable from openqa workers) - and I somewhat assume this is the same reason here: we failed to download release notes

#3 - 2019-12-20 13:48 - dimstar

We should get the rel notes from doc.opensuse.org - and from ow1, this results in:

curl http://doc.opensuse.org
curl: (7) Failed to connect to doc.opensuse.org port 80: Connection refused
#4 - 2019-12-21 18:10 - dimstar
This is an infra ticket by now:
https://infra.nue.suse.com/SelfService/Display.html?id=158856

#5 - 2020-01-14 16:22 - riafarov
- Due date set to 2020-01-28
- Status changed from New to Rejected
- Assignee set to riafarov
- Target version set to Milestone 30

Is magically resolved: https://openqa.opensuse.org/tests/1142509
