

openSUSE Leap 15.2 - action #61518

release manager checklist

2019-12-20 13:03 - Inussel

Status:	Rejected	Start date:	2020-04-20
Priority:	Normal	Due date:	2020-04-20
Assignee:		% Done:	0%
Category:	Infrastructure	Estimated time:	0.00 hour
Target version:	RC		
Description			
To branch the current ftp tree and isos for a milestone, log in to download.opensuse.org as mirror user and run: <pre>distro_hardlink_copy 42.2-Current 42.2-RC1</pre>			
Remove x bit for others from the directory so only staging mirrors can pull it but it's not visible on download.o.o			
on release day every once in a while scan for mirrors as mirror user: <pre>mb scan -a -d /distribution/leap/42.2-RC1 -j4</pre>			
In the morning add the x bit again to make the content show up and give mirrors time to catch up adding the x bit.			
At release time:			
<ul style="list-style-type: none">change the symlink to the new milestone			
<pre>distro_symlink 42.2 42.2-RC1</pre>			
<ul style="list-style-type: none">sync the staging are to the area shown in download.opensuse.org			
<pre>publish_opensuse</pre>			
You may want to add '-n' before to check what it's doing and not deleting files
