That's obvious because Leap 15.2 is planned to be released only in 2020-05, see <https://en.opensuse.org/openSUSE:Roadmap>. I don't think we should drag along that many incompletes for the next four months so can you please disable the triggering of tests again until the necessary assets exist? As an alternative to test against the "test" maintenance updates you could use an intermediate build as base and update to GM after GA of Leap 15.2. Please understand that we within the QA tools team try to keep the incompletes at bay to prevent any critical issue being unhandled for long so I plan to prevent the incompletes in the coming days if you can't come to preventing them by one of the approaches suggested above, e.g. by removing the job templates or removing the medium definition temporarily, etc.

#4 - 2020-01-21 12:42 - okurz

- Subject changed from [qam][maint]openSUSE Leap 15.2 enablement/Leap 15 disablement to [qam][maint]openSUSE Leap 15.2 enablement/Leap 15 disablement auto_review:"Download of .*openSUSE-Leap-15.2-DVD.*.iso" failed.*404"

Adding "auto_review" tag to use the ticket as label for incompletes like <https://openqa.opensuse.org/tests/1150025>, labeled by gitlab.suse.de/openqa/auto-review/

#5 - 2020-01-31 11:11 - okurz

ok so the incompletes are still there so it seems like you did not change the scheduled asset hence for the time being I removed the products from the job group:
