Description

Observation

This code causes the test module be marked as failed, when it shouldn't.

```perl
record_info('Upgraded?',
    'Has the SUT been upgraded or installed from LIVECD? Both can possibly cause orphans',
    result => (is_offline_upgrade_or_livecd) ? 'ok' : 'fail');
```

Suggestions

- Only show the message if orphans are detected.

Reproducible

- In scenario sle-15-SP2-Online-ppc64le-extra_tests_in_textmode@ppc64le
- Fails since Build 126.1

Tasks

- display in the title whether the module is an upgrade or not:

  ```perl
  record_info((is_offline_upgrade_or_live_cd)? "Upgrade/Live" "No upgrade/live")
  ```

Expected result

It never worked since it was added.
Last good from Leap 15.2: 552.2

Further details

Always latest result in this scenario: latest

History

#1 - 2020-03-25 07:11 - okurz
This is an autogenerated message for openQA integration by the openqa_review script:

This bug is still referenced in a failing openQA test: extra_tests_textmode
https://openqa.suse.de/tests/4024486

To prevent further reminder comments one of the following options should be followed:

1. The test scenario is fixed by applying the bug fix to the tested product or the test is adjusted
2. The openQA job group is moved to "Released"
3. The label in the openQA scenario is removed
