Target version:			
Difficulty:			
Description			
The openqa-bootstrap-container script does not install the packages:			
<ul style="list-style-type: none">• qemu-tools• perl-LWP-Protocol-https			
inside the container which leaves the test instance pretty crippled, as it:			
<ul style="list-style-type: none">• cannot download assets via https• cannot launch a worker as they die with qemu errors			

History

#1 - 2020-01-22 16:23 - mkittler

We should likely just add perl-LWP-Protocol-https as a dependency of the openQA-client package. SSL support can be considered essential now and the package is very small anyways.

Not sure about qemu-tools because we also have other backends. Hence QEMU is so far only recommended by the os-autoinst package. It would still make sense to install it into the container most of the time so we could make that the default and add a --no-qemu parameter.

PR for perl-LWP-Protocol-https: <https://github.com/os-autoinst/openQA/pull/2685>

#3 - 2020-01-22 18:39 - okurz

- Category set to Concrete Bugs

I agree that we should cover the Protocol part only for now. PR merged. As this is about contents in the package please check the actual packages for verification.

#4 - 2020-01-23 10:42 - mkittler

- Status changed from In Progress to Resolved

I've checked that the package has dependency now. Skipping QEMU for now sounds reasonable so I would close the ticket.
