**Description**

I found that there are many old files kept in pontifex2:/srv/ftp/pub/opensuse/distribution/leap/15.2/repo/oss/

```
time ls -l /srv/ftp/pub/opensuse/distribution/leap/15.2/repo/oss/x86_64/wc
111800 1006193 10718652

real 1m18.951s
user 0m1.206s
sys 0m2.576s
```

vs the 20 k files in 15.1

OBS team (Marco) said, they upload their files to pontifex2 and there is only the latest version in the upload dir.

## History

### #1 - 2020-01-22 13:47 - Inussel

- Assignee changed from Inussel to lkocman

the cleanup script is probably not set up correctly

### #2 - 2020-02-19 14:02 - lkocman

Thank you very much for reporting this issue. I've forwarded it to [heroes@opensuse.org](mailto:heroes@opensuse.org) as I currently don't have ssh access there (requested right away via [infra@suse.de](mailto:infra@suse.de)).

### #3 - 2020-02-19 14:20 - pjessen

Hi Lubos

I think it might be an rsync option on the sending side? Granted, I am not intimately familiar with everything that happens on download.o.o, but I don't remember fiddling with any such cleanup for leap 15.1.

Missing a `-delete{-after,-before}` option maybe ?

### #5 - 2020-02-19 14:32 - lkocman

Yes that's what I was thinking about as well. Let me find out what tool/script is calling rsync.

### #6 - 2020-02-19 14:48 - lkocman

Seems like the publisher is owned by OBS team. I did create a github issue and pinged team on #dist <https://github.com/openSUSE/open-build-service/issues/9097>

### #7 - 2020-02-19 15:24 - Inussel

It's [https://github.com/openSUSE/publish\\_distro](https://github.com/openSUSE/publish_distro) in ~mirror and not OBS' fault. Unfortunately github doesn't let me comment on the issue. You can

close it. The problem is on pontifex side.

Response from Rudi

Lubos Kocman looks like you are aware, just to make sure. OBS already syncs to the staging area on pontifex with --delete, the problem was local on pontifex where the cleanup after syncing from stage to prime was missing (normally it deletes the older files after 3 days). I think we fixed the issue yesterday evening, so the next cleanup should run in the normal schedule in two days now

So I take that it's resolved.
