openQA Tests - action #63334
[functional][u][sporadic] test fails in chromium to go to "about/version" page in adress bar
2020-02-10 13:16 - okurz

Status: Resolved
Priority: High
Assignee: dheidler
Category: Bugs in existing tests
Target version: Milestone 30

Description

Observation

openQA test in scenario opensuse-Tumbleweed-DVD-x86_64-gnome@64bit fails in chromium to reach the address bar.

Suggestion

- Try to assert_screen of the selected address bar. When the address bar is selected, the whole URL is shown, including the protocol, so matching only the :// part should work for all cases.
- If it doesn't work, put the ticket status to new.

Reproducible

Happened at least once before, see https://openqa.opensuse.org/tests/1169575#next_previous

Expected result

https://github.com/os-autoinst/os-autoinst-distri-opensuse/pull/5784 was not only bumping a timeout but also changing "about:" to "chrome://version" with no proper reasoning provided. Could be that this helps already but here we might have a problem that the address bar is not focussed or not reactive.

Last good: 20200207

Further details

Always latest result in this scenario: latest
