Description

Observation

openQA test in scenario opensuse-15.2-DVD-x86_64-extra_tests_on_gnome@64bit in steam shows "Fatal error: nothing provides" but https://openqa.opensuse.org/tests/1173170#step/steam/26 mentions "pkcon succeeded" which is apparently wrong.

Test suite description

Maintainer: asmorodskyi, okurz. Extra tests which were designed to run on gnome

Reproducible

Fails since (at least) Build 535.2

Expected result

the test code should fail if pkcon fails to install a package.

Further details

Always latest result in this scenario: latest
