New incompletes			
27.000			
keep in minds. I bumped the alert threshold so that only if 25 new incompletes occur within one reporting period, that is just 10 seconds (!). I checked 2 out of many jobs and found the same reason: "Reason: associated worker re-connected but abandoned the job"			
The good thing is that they have all been automatically cloned.			
Suggestions			
I guess we need just one more change to the scripts in https://github.com/os-autoinst/scripts/ :			
1. ignore incompletes that have a clone			
Who wants to give it a shot? :)

- Subject changed from Improve openqa-monitor-incompletes and openqa-label-known-issues to not report about incompletes with clone / no complain about no logs when there is "reason" to Improve openqa-monitor-incompletes and openqa-label-known-issues to not report about incompletes with clone

- *Description updated*

#5 - 2020-09-08 10:17 - okurz

- *Status changed from Workable to Rejected*

- *Assignee set to okurz*

I am thinking about the following use-case: A human reviewer is grumpily retriggering an incomplete every day so there is a clone in this case but that person never reports the issue so we would not catch these problems. Rather than skipping the incompletes in openqa-monitor-incompletes we could skip over trying to clone the incompletes in openqa-label-known-issues but the API call is a no-op anyway so let's just not care.

#6 - 2020-09-08 10:17 - okurz

- *Status changed from Rejected to Resolved*

- *Assignee changed from okurz to cdywan*

Actually cdywan and me discussed this and only then realized what the proper use case is so the honor goes to him.
