Target version:			

Description

The zkvm slots on openqaworker2 frequently lose VNC and/or SSH connection between the host and VM. The first recent appearance of this problem was on 2020-02-19 around 1AM and affects both SLE-15GA and SLE-15SP1. SLE-12* jobs use different worker class.

- Status changed from New to Rejected
- Assignee set to okurz

All of the jobs you referenced are gone by now. Based on not much more available information I doubt anyone can provide feasible help. I hope you find a better way for reproduction. Maybe what text to grep for in log files could be helpful.
