Description

Observation

openQA test in scenario opensuse-15.2-GNOME-Live-aarch64-gnome-live@USBboot_aarch64 fails in firefox_audio because "firefox is still running". Maybe handle this case in test to close this window and retry?

Suggestions

- Investigate why the firefox process is still running (product bug?)
- Wait until the process is finished before executing firefox again in firefox_audio.

Reproducible

Fails since (at least) Build 1.25

Expected result

Last good: (unknown) (or more recent)

Further details

Always latest result in this scenario: latest

checked that firefox_audio has been removed from testsuite of Leap. And I cannot find failure on TW.

So this becomes invalid.
