Description

Observation

A call to ssh-keyscan -p 4242 localhost >> ~/.ssh/known_hosts, seems to have failed, but there are no logs, however the same test module, passed in the extra_tests module (https://openqa.suse.de/tests/4031234/modules/sshd/steps/66) it could be possible, that we're again, having missing keys :/

openQA test in scenario sle-15-SP2-Online-ppc64le-textmode@ppc64le fails in sshd

Suggestion

- Separate the debug output from the interactive terminal.
- Find out the exit code of the failing command: ssh-keyscan -p 4242 localhost >> ~/.ssh/known_hosts

Reproducible

Fails since (at least) Build 163.11 (current job)

Expected result

Last good: 163.1 (or more recent)

Further details

Always latest result in this scenario: latest

History

#1 - 2020-03-25 14:28 - szarate
- Subject changed from [functional][u] test fails in sshd - keyscan failed, no logs to [functional][u] test fails in sshd - keyscan failed, no logs (missing keys, most likely)

Looks like so: https://openqa.suse.de/tests/overview?groupid=96&distri=sle&version=15_SP2&build=foursixnine_163.11 all jobs are passing here, so likely missing keys.

#2 - 2020-03-30 09:39 - SLindoMansilla
- Description updated
- Target version set to Milestone 30
- Estimated time set to 42.00 h

#3 - 2020-04-07 09:39 - zluo
- Status changed from Workable to In Progress
- Assignee set to zluo
take over

#4 - 2020-04-07 12:31 - zluo
https://openqa.suse.de/tests/4031125#downloads provided already some sshd related logs.

#5 - 2020-04-07 12:46 - zluo
- Status changed from In Progress to Rejected

https://openqa.suse.de/tests/4097859#next_previous shows over 100 test runs without issue.
