Description

observation

The result filter on "All tests" page affects running and scheduled job tables. This is notable when *reloading* the page after selecting a filter (or adding the URL query parameter manually).

problem

This is weird considering the filter is within the "Last XXX finished jobs" section and running/scheduled jobs don't have a result anyways. It is also not what I had in mind when adding the filter.

suggestion

The tables for running/scheduled jobs should be unaffected by query parameters.

History

#1 - 2020-04-23 18:52 - okurz

- Category changed from *Concrete Bugs* to *Feature requests*
- Priority changed from *Normal* to *Low*

While I see the problem as you mentioned I see it neither as a regression nor impacting important use cases. Selecting filters is always an explicit choice and I guess users that are able to use the filter learn quickly about this limitation.
