openQA test in scenario opensuse-15.2-NET-x86_64-upgrade_Leap_15.0_cryptlvm@uefi fails in shutdown
seems like shutdown test does way more than I expected, actually I haven't seen a shutdown execution anywhere in the graphical output.
I can't really open the screenshot reporting failure.

Test suite description
Upgrade scenario with cryptlvm for Leap 15.0.

Reproducible
Fails since (at least) Build 620.1 (current job)

Expected result
Last good: 619.3 (or more recent)

Further details
Always latest result in this scenario: latest

History
#1 - 2020-04-12 11:43 - okurz
- Subject changed from test fails in shutdown - doesn't seem to be shutdown related to [functional][u] test fails in shutdown - doesn't seem to be shutdown related
- Description updated

lkocman please don't put description outside header section. Feel free to adapt the template to your liking though. And better try to use assignees from the start. There is hardly anyone besides me that really cares that tickets without team tag are followed up with.

#2 - 2020-05-25 09:38 - SLindoMansilla
- Status changed from New to Rejected
- Assignee set to SLindoMansilla
- Target version set to Milestone 30

Not reproducible for a long time: https://openqa.opensuse.org/tests/1276613#next_previous
