**Description**

**Motivation**

It's clear that users might use USB for the Full medium installation, especially as it doesn't fit on DVDs. Same is true for installations using mirror.

It's unlikely that users will use mirror of online medium as we already boot into it, so it doesn't make much sense.

Whereas scenario where we boot into Online medium and use Full medium repo is plausible as allows to skip registration.

We should at least validate that mirror we used for installation is added as a repo in the installed system.

Scope is 64-bit only.

+VAR can be used to overwrite any setting in the job group.

**Acceptance criteria**

1. gnome_http gnome_self_signed_https gnome_smb scenarios use full medium repo mirror and test unregistered installation
2. Installation is validated
3. Test plan is updated accordingly (https://gitlab.suse.de/qsf-y/qa-sle-functional-y/-/blob/master/SLES_Integration_Level_Testplan.md)
