Target version:	future			
Difficulty:				

Description

When users use openqa-clone-custom-git-refspec to trigger a job which has a parent job (START_DIRECTLY_AFTER_TEST=XXX), the two jobs were triggered and they had the same TEST.

Steps:

1. remove the default parameter --skip-chained-deps from openqa-clone-custom-git-refspec. (If not remove, only one job will be triggered)
2. using openqa-clone-custom-git-refspec to trigger one job with parent job or parallel job, with -c "--parental-inheritance"
3. two jobs will be triggered and with same TEST

Here is an example:

```
openqa-clone-custom-git-refspec https://github.com/hjluo/os-autoinst-distri-opensuse/tree/ppc64le-
spvm http://openqa.nue.suse.com/tests/4142993 -c " --apikey xxx --apisecret xxx" _GROUP=0 -c " --p
arental-inheritance"

Created job #4144834: sle-15-SP1-Migration-from-SLE15-SPX-to-SLE15-SP2-ppc64le-Build178.1-offline_
sles15sp1_media_basesys-srv_all_full_spvm_peperation@ppc64le-hmc -> http://openqa.nue.suse.com/t41
44834
Created job #4144835: sle-15-SP2-Migration-from-SLE15-SPX-to-SLE15-SP2-ppc64le-Build178.1-offline_
sles15sp1_media_basesys-srv_all_full_spvm@ppc64le-hmc -> http://openqa.nue.suse.com/t4144835
```

Suggestion:
The TEST should not be overridden in parent or parallel job.

- Target version set to future

Yes, this happens but we should rather invest our time in better integral support of version control systems within openQA rather than the wrapper scripts. See [#58184](#)
