Description			
<p>I, as a test developer, would like to find widgets in the UI using regular expression, so that I don't need to store long string being used as labels.</p> <p>Also for dynamic parts, like versions in the labels.</p> <p>Scope is client side only.</p> <p>Use case: widget has label "qwertyuiop[asdfghjklzxcvbnm,qwertyuiopqwertyuiop[asdfghjklzxcvbnm,qwertyuiop]" And to avoid having this huge line hardcoded anywhere, we could simply use regexp which will provide unique match, e.g. /qwe.*/. Ticket include creation unit-tests.</p>
