Difficulty:			

Description

Observation

openQA test in scenario sle-12-SP3-Server-DVD-Updates-x86_64-create_hdd_xfstests@64bit fails in [install](#)

Test suite description

Maintainer: yosun, this case based on create_hdd_minimal_base+sdk_withhome, install packages, enable kdump and install xfstests in it.

Reproducible

Fails since (at least) Build [20200519-2](#)

Expected result

Last good: [20200519-1](#) (or more recent)

Further details

Always latest result in this scenario: [latest](#)

Variable XFSTESTS_REPO is invalid. Product QA is not responsible for it. Not sure why QAM jobs contains such configuration item. It is not needed for xfstests.

History

#1 - 2020-05-21 09:36 - pcervinka

- Subject changed from [qam] test fails in install - incorrect job configuration to [qam] test fails in install - incorrect job configuration XFSTESTS_REPO

#2 - 2020-05-21 09:38 - dzedro
