Is it just a random version of [container-host](#) or is it really the version N-1?

[container-host]: <https://openqa.opensuse.org/tests/1277010#downloads>

"Boot from existing, static MicroOS ContainerHost image", so it's indeed the former.
It's in the hdd/fixed asset directory on o3.

I put a current aarch64 image in there now, it should be working again.
