Target version:	
Description Hi After upgrades etc we have noticed that the vBulletin search feature stop working for certain text strings, in this case "WSL", there are a number of posts with this text in the forum. Since the move to NU, can the database be re-indexed (or whatever is required) to enable the search feature to work as users expect.	

History

#1 - 2020-05-27 10:11 - pjessen

- Tracker changed from communication to tickets
- Category set to Servers hosted in NBG
- Status changed from New to Workable

I'll have a look, but I can't promise much.
