invis-bbu: Issue with repo-pw if disk and net-backup are used together

2020-06-10 06:45 - flacco

Status: Closed	Start date: 2020-06-10
Priority: High	Due date: 2020-06-30
Assignee: flacco	% Done: 100%
Category:	Estimated time: 0.00 hour
Target version: 0.9	

Description

If both backup scenarios are used mixed there will be two passwords created. Both use the same variable-name -> concurrency!

There are two possible ways to deal with this situation:

1. Set two different variables
2. Check during setup if there is there is a password already set and use this.
