**Description**

The tumbleweed and distribution folders on widehat haven't been updated since Jan 2020. For example:

- [http://widehat.opensuse.org/distribution/leap/15.2/iso/](http://widehat.opensuse.org/distribution/leap/15.2/iso/)

Is this mirror still active? Otherwise, do you have recommended mirrors (with ports and tumbleweed) that can be used as a rsync upstream?

Thanks for your help!

**History**

**#1 - 2020-06-14 09:33 - pjessen**

- Tracker changed from communication to tickets
- Status changed from New to Workable
- Private changed from Yes to No

I can confirm rsync.o.o is way out of date. I also see no rsync access from any 62.146.92 address in the last 30 days. What is almost worse, at mirrors.o.o, it is still listed as being current. I can't access widehat, my key isn't installed.
