**Description**

we have issues with the nameserver on 192.168.47.101:

curl -v https://review.opendev.org/
< X-Squid-Error: ERR_DNS_FAIL 0

**host zq1.de**

Host zq1.de not found: 5(REFUSED)

cat /etc/resolv.conf
search infra.opensuse.org
nameserver 192.168.47.101
nameserver 192.168.47.102
options attempts:1 timeout:1

it looks like 192.168.47.101 is down.

**History**

**#1 - 2020-08-02 18:02 - pjessen**

- Private changed from Yes to No

Looks like DNS on elsa is now working again, I guess somebody fixed it.

**#2 - 2020-09-14 12:14 - lrupp**

- Category set to Core services and infra
- Status changed from New to Closed
- Assignee set to lrupp
- % Done changed from 0 to 100

Let's close this, as it looks fixed after >1 month.
