

openQA Project - action #69490

openqa webui sometimes displays the test suite instead of the needles in the needles drop down

2020-07-31 16:53 - dancermak

Status:	Resolved	Start date:	2020-07-31

Target version:	Ready		
Difficulty:			
Description			
During testing I have frequently had the issue that the matching needle drop down menu would no longer display the matched needles but instead a part of the test suite page (see the attached screenshot). The issue disappears when I reload the page.			
This is my local openQA instance: openQA-4.6.1595658530.ccadcf580-1.1.noarch

I have never seen this AFAIR. Can you reproduce this on other instances? Does this happen since a certain version? Can you reproduce on another browser/X-Server/machine? Can you give details about your operating system and browser versions?

I have noticed this issue only today and never before (used openQA the last time on Wednesday). Unfortunately I cannot reproduce the issue, it occurred annoyingly often with qutebrowser (have not tried any other browser) when I was fixing the rstudio tests today, but now not anymore :(If the issue occurs again, then I will try to gather more data.

I can confirm that this issue happens sometimes. It only started happening recently (~last week).

#4 - 2020-08-06 15:11 - MDoucha

The screenshot shows a running job. It might be a race condition between two AJAX requests (one for module list update and another for the needle list).

hm, so it's likely that this is actually related to recent work that introduced more reliance on ajax to update the module list.

Has the test been paused using the developer mode? I'm just wondering because usually there are no preview images for the currently running module.

I think it was in developer mode. And yes, sometimes there are no preview images in developer mode, but sometimes they show up after waiting for a while and switching back and forth between the live view and the test overview.

I'll have a look.

I couldn't reproduce the exact issue because other bugs (likely regressions from <https://github.com/os-autoinst/openQA/pull/3352>) prevented me from coming that far. So I fixed these bugs which involved rewriting some code (see <https://github.com/os-autoinst/openQA/pull/3412>). I couldn't reproduce the exact issue but judging by the code there might have been the possibility that preview links get mixed up. That shouldn't be possible anymore so I suppose the issue is fixed now. To be sure I also ran the rstudio test locally and changed a lot between the screenshot previews, text previews and tabs, paused with the developer mode and so on.

I'll keep the ticket in feedback. So let me know if you can still encounter the issue after <https://github.com/os-autoinst/openQA/pull/3412> has been deployed. Otherwise I'll consider the issue resolved after some time.
