

openQA Project - action #70654

Create git-subrepo for tools/update-deps

2020-08-28 11:04 - tinita

Status:	Resolved	Start date:	2020-08-28
Priority:	Normal	Due date:	
Assignee:	tinita	% Done:	0%
Category:	Feature requests	Estimated time:	0.00 hour
Target version:	Ready		
Difficulty:			
Description			
To make it easier to keep common tools like tools/update-deps in sync between openQA and os-autoinst, create a subrepo with https://github.com/ingydotnet/git-subrepo			
Then the script can be updated with git subrepo push/pull.

Merged.

The only problem is that OBS build on SLE 12 is failing:

```
[ 67s] + rm -r /home/abuild/rpmbuild/BUILDROOT/os-autoinst-4.6.1599143921.f85dd213-561.1.x86_64/usr/lib/os-a
utoinst/tools/
[ 67s] + rm -r /home/abuild/rpmbuild/BUILDROOT/os-autoinst-4.6.1599143921.f85dd213-561.1.x86_64/usr/lib/os-a
utoinst/external/
[ 67s] rm: cannot remove '/home/abuild/rpmbuild/BUILDROOT/os-autoinst-4.6.1599143921.f85dd213-561.1.x86_64/u
sr/lib/os-autoinst/external/': No such file or directory
[ 67s] error: Bad exit status from /var/tmp/rpm-tmp.izfzci (%install)
```

I assume your unassigning means you do not plan to fix the build failures within OBS

#8 - 2020-09-09 09:39 - tinita

Yeah, because I have no idea what the problem could be.

#9 - 2020-09-10 07:23 - okurz

In <https://build.opensuse.org/package/meta/devel:openQA/os-autoinst> I have disabled the builds on SLE_12_SP4 and SLE_12_SP5 currently due to the problem reported in this ticket. This means that also installing based on autotools currently fails.

#10 - 2020-09-10 07:30 - okurz

Actually needed to disable in <https://build.opensuse.org/package/meta/devel:openQA/openQA> as well

Now it is additionally unresolvable because perl-Test-Most is not present. I've tried to link it into our SLE-12 subproject but it is unresolvable because a lot of other dependencies are missing.

I could now

1. try to make our dependency on perl-Test-Most optional.
2. try to build newer versions of these dependencies (and their dependencies) as well.

Considering the effort I doubt it is worth implementing any of these options.

The SLE-12 build was used to test the autotools-based build system. Since the CMake-based build system works sufficiently maybe it is now also the time to get rid of the autotools-based build system and SLE-12 builds.

yes, you can remove autotools and the SLE12 stuff

#15 - 2020-11-12 14:00 - mkittler

Here's a PR for removing autotools: <https://github.com/os-autoinst/os-autoinst/pull/1560>

When it has been merged I'll remove the SLE12 repositories from our project. I suppose the SLE12 subprojects can be removed as well.

This hasn't to do much anymore with the initial ticket description (considering that other problems prevent the SLE12 build as well). So I would mark the ticket as resolved here.
