**Description**

**Observation**

Very often we end up losing a lot of possible tests, due to the SUT not being responsive enough, and SUT failing to login (For one or another reason)

As a suggestion, instead of trying a graphical shutdown, let's switch to a text based one (forced) via variable in the test suite definition

openQA test in scenario sle-15-SP3-Online-s390x-create_hdd_gnome@s390x-kvm-sle12 fails in shutdown

**Test suite description**

image creation job used as parent for other jobs testing based on existing installation. To be used as
START_AFTER_TEST=create_hdd_gnome

**Tasks**

- To avoid performance problems via graphical shutdown, change the power action to shutdown in textmode.

**Reproducible**

Fails since (at least) Build 36.5

**Expected result**

Last good: 34.1 (or more recent)

**Further details**

Always latest result in this scenario: latest

**Related issues:**

Related to openQA Tests - action #64812: [qe-core][functional][sporadic][needs-refining] test fails in shutdown - Screen buffer shows old display state instead of locked screen, ensure_unlocked_desktop thinks it is unlocked and test fails later added
