Target version:	

Description

Observation

There have been some failures in installation module for different test suites. Even though the yast installer is still running, the needle match doesn't recognize it.

example:
openQA test in scenario sle-15-SP3-Online-x86_64-autoyast_home_encrypted@64bit fails in [installation](#)

Could be that the timeout in tests/installation/await_install.pm:74 might need to be increased, but as this is a sporadic failure it would need some verification runs.

Notice: The installation progress before and after failure is different, so this doesn't seem like an actual stall.
