

openQA Infrastructure - action #73165

[osd] Consolidate "expensive+fast" and "cheap+slow" storage after realizing vdc is "cheap+slow" as well

2020-10-09 11:48 - okurz

Status:	Resolved	Start date:	2020-09-02
Priority:	Normal	Due date:	
Assignee:	okurz	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Ready		
Description			
Motivation			
We learned in https://infra.nue.suse.com/SelfService/Display.html?id=178140 that vdc is already cheap+slow so we have vde now but that does not seem to make sense to me anymore. We worked based on wrong assumptions it seems :)			
Acceptance criteria			
<ul style="list-style-type: none">• AC1: It is obvious from system descriptions, mount point names, documentation and/or salt states which storage is "cheap+slow" and which is "expensive+fast"			
Suggestions			
<ul style="list-style-type: none">• Extend existing storage with help from SUSE IT (waiting for https://infra.nue.suse.com/SelfService/Display.html?id=178140 , then resizing existing filesystem)• Optional: Get rid of vde again and merge with vdc* Change existing mount points to include "fast" or "slow" as well• Look for other places where we can describe the current status and specifications, e.g. salt states, progress (or confluence)
