#### Description

### Observation

openQA test in scenario opensuse-Tumbleweed-DVD-x86\_64-virtualization@64bit fails in [yast\\_virtualization](#)

yast virtualization newly prompts the user about NM managed system, about bridge configuration not being auto-configured. This dialog is new, the test code unaware of it.

Preferable option would be to reconfigure the test suite to use image with wicked (created by create\_hdd\_gnome\_wicked test suite). Other option would be to assert that warning is shown and process it.

### Test suite description

Maintainer: okurz. Test virtualization stack using libvirt and virt-manager.

### Reproducible

Fails since (at least) Build [20200918](#)

### Expected result

Last good: [20200916](#) (or more recent)

### Further details

Always latest result in this scenario: [latest](#)
