Description

Observation

container image devel:openQA:ci/base in https://build.opensuse.org/package/show/devel:openQA:ci/base is unresolvable with "nothing provides this-is-only-for-build-envs needed by cmake-mini", probably caused by #69154 and okurz switching the base OS config from openSUSE Leap 15.1 to openSUSE Leap 15.2

Impact

Likely we need this container in os-autoinst but not anymore in openQA but os-autoinst then could fail eventually

Suggestions

Research what the error message means, potentially ask in IRC e.g. [#opensuse-factory](irc://chat.freenode.net/opensuse-factory) or mailing lists

I tried adding Prefer: cmake-full to https://build.opensuse.org/projects/devel:openQA:ci/prjconf as suggested on IRC. So far it doesn't seem to make a difference but maybe it just takes a while until dependencies are recomputed (triggering services didn't help).

If it doesn't work we can still workaround the issue by adding cmake-full explicitly in the Dockerfile. That seems to work for the branch within my home project: https://build.opensuse.org/package/show/home:mkittler:branches:devel:openQA:ci/base

#4 - 2020-10-26 16:02 - mkittler

- Status changed from Workable to Resolved

Fixed on the level of the 15.2 template project by adrianS_. So the container is now resolvable again and I changed our project config to how it was before.

#5 - 2020-10-26 16:05 - okurz

awesome! This is like the third issue where adrianS helped with problems I have seen today :)
