Description			
Motivation			
<ul style="list-style-type: none">• Need to upgrade machines before EOL of Leap 15.1 and have a consistent environment			
Acceptance criteria			
<ul style="list-style-type: none">• AC1: osd webui host runs a clean upgraded openSUSE Leap 15.2 (no failed systemd services, no left over .rpm-new files, etc.)			
Suggestions			
<ul style="list-style-type: none">• read https://progress.opensuse.org/projects/openqav3/wiki#Distribution-upgrades• Reserve some time when the instance is only executing a few or no openQA test jobs• After upgrade reboot and check everything working as expected			
Further details			
<ul style="list-style-type: none">• If we loose access to the machine we need the help of EngineeringInfrastructure as only they have access to the VM

DONE

- Turns out test -f /etc/openqa/openqa.ini && sudo -u geekotest /opt/openqa-scripts/dump-psql pg_dump: [custom archiver] could not open output file "/var/lib/openqa/SQL-DUMPS/2020-12-14.dump": Permission denied but it looks to have created a dump anyway.
- Downloading packages again after package download failure
- Rebooted, all lookig good, new jobs are running, existing jobs were picked up with no disruption
