<b>Category:</b>		<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	Alpha		
<b>Description</b>			
The UEFI certificate in staging and rings needs to be equal. If there's something wrong, like openQA not booting verify by checking /etc/uefi/certs in the shim package in Leap vs Factory. Use openssl to dump the certificates:			
<pre>openssl x509 -noout -text -nameopt multiline,utf8,-esc_msb -inform DER -in \$file</pre>
